

Seventh International Conference on Global Change: Connection to the Arctic (GCCA-7)

*19-20 February, 2007
The Fairbanks Princess Riverside Lodge
Fairbanks, Alaska*

Jointly Organized by:

International Arctic Research Center, Fairbanks Alaska
National Institute for Polar Research, Tokyo Japan
Japan Aerospace Exploration Agency, Tokyo Japan
International Organizing Committee for GCCA-7

Local Organizing Committee:

Larry Hinzman	University of Alaska Fairbanks, Chair
John Walsh	University of Alaska Fairbanks, Secretary
Craig Dorman	University of Alaska
F. Stuart Chapin	University of Alaska Fairbanks
Glenn Juday	University of Alaska Fairbanks
Terry Whitledge	University of Alaska Fairbanks
Vladimir Romanovsky	University of Alaska Fairbanks
Douglas Kane	University of Alaska Fairbanks

Committee of the University Consortium for GCCA

Syun-Ichi Akasofu	University of Alaska, Chair
Hiroshi Fukunishi	Tohoku University
Isao Murata	Tohoku University
Masami Fukuda	Hokkaido University
Hiroshi Tanaka	University of Tsukuba
Yutaka Matsumi	Nagoya University
Hiroshi Kanda	National Institute of Polar Research
Yojiro Matsuura	Forestry & Forest Products Research Institute
Minoru Kasahara	Hokkaido University
Shinichi Urano	Hokkaido University
Fumiaki Kimata	Nagoya University
Yasuhiro Murayama	National Institute of Information and Communications Technology
Noriyuki Tanaka	Hokkaido University
Yoshinobu Harazono	University of Alaska
John Walsh	University of Alaska
Vladimir Romanovsky	University of Alaska
F. Stuart Chapin	University of Alaska
Larry Hinzman	University of Alaska

Conference Venue

The Fairbanks Princess Riverside Lodge
4477 Pikes Landing Road
Fairbanks Alaska 99709

Secretariats

Larry Hinzman
International Arctic Research Center
University of Alaska

Masami Fukuda
Institute of Low Temperature Science
Hokkaido University

Hiroshi L. Tanaka
Center for Computational Sciences
University of Tsukuba

Preface

Seventh International Conference on Global Change: Connection to the Arctic (GCCA-7)

It is our great pleasure to hold the 7th International Conference on Global Change: Connection to the Arctic (GCCA-7) at the International Arctic Research Center (IARC), University of Alaska Fairbanks (UAF) during 19 to 20 February 2007. The GCCA conferences have been organized by the IARC/UAF and the Committee of the University Consortium for GCCA in order to study and predict the arctic climate change in the context of the recent global warming. The conference is aimed to summarize our understanding of the climate variability and climate change and the goal is extended to find the new directions and perspectives of polar climate investigation. To these purposes, climate experts in a wide variety of relevant disciplines have been invited to present papers and to hold panel and informal discussions.

IARC/UAF is a unique focal point of international climate change research in the Arctic, which was built in 1999 by the “Common Agenda” between the United States of America and Japan. During the phase of the establishment, two Wadati Conferences were held in 1995 and in 2001 to summarize the research progresses in global change connected to the Arctic. Professors John E. Walsh and Andrey Proshutinsky served as the first and second Wadati Chair Professors, respectively. The summarizing activity was succeeded by the GCCA, organizing the International University Consortium. The first GCCA conference (GCCA-1) was held at Tohoku University in Sendai in August 2000; GCCA-2 at Hokkaido University in Sapporo in January 2001, GCCA-3 at the IARC/UAF in November 2002, GCCA-4 at the Solar-Terrestrial Environment Laboratory of Nagoya University in November 2003, GCCA-5 at the University of Tsukuba in November 2004, GCCA-6 at Miraikan in Tokyo in December 2005, and GCCA-7 here in IARC/UAF.

A preparation for the next stage of the International Conference on Global Change connected to the Arctic and Subarctic is in progress with a strong support by the National Institute of Polar Research (NIPR) in Japan. As an organizer of the GCCA from the beginning, we sincerely appreciate the attendants to the GCCA-7, and hope the continuous participation to the International Conference on Global Change connected to the Arctic and Subarctic.

Sincerely,

Hiroshi L. Tanaka
Committee of the University Consortium for the GCCA
University of Tsukuba, Japan

Introduction

Seventh International Conference on Global Change: Connection to the Arctic (GCCA-7)

Climate change in the Arctic is real; the verification of a change is apparent throughout the Arctic and Subarctic in a wide variety of environmental components. Very rapidly our world's population and our political leaders are accepting that realization, and the evidence they most often cite is from the polar regions. Most of our scientists, our agency leaders and many of our policy makers have understood and acknowledged that premise for many years due in a large part to scientific meetings such as this series of conferences entitled Global Change: Connection to the Arctic. Through arduous field studies, intensive numerical analyses and integration and synthesis of a broad array of results, arctic researchers have proven the climate has indeed changed markedly over the last century. But many challenges remain. We must continue to synthesize our study results into a coherent understanding of the arctic system. The complex interplay of physical, chemical, biological and social processes interact to such a degree that it is not possible to understand future trajectories without developing more fully holistic perspectives of the complete system.

Arctic researchers must continue to work as collaborators and partners if we hope to reach our common goal of understanding the whole Arctic, the interactions with the more temperate regions and the external drivers. Although it is a bit overwhelming to consider attempting to develop a quantitative understanding of the whole Arctic system, we can work on distinct linkages and associated feedbacks, which will contribute to a broader understanding of the system as a whole. In a collaborative effort with arctic researchers around the world, we can achieve this level of understanding.

We are pleased to welcome researchers from Japan, Russia, Canada and across the United States to Alaska to participate in the Seventh International Conference Global Change: Connection to the Arctic (GCCA-7). GCCA conferences have previously been held in Sendai (2000), Sapporo (2001), Fairbanks (2002), Toyokawa (2003), Tsukuba (2004), and Tokyo (2005). This series of conferences have been organized by the member universities of the University Consortium for GCCA in Japan and the International Arctic Research Center at the University of Alaska Fairbanks in order to study Arctic climate change, global warming, and to improve our predictive capability for the future changes. The focus of this conference is (1) to synthesize a broad range of arctic research activities to enhance understanding of the linkages among system components (2) to integrate our understanding of the role of the Arctic in the global climate change in order to provide direction for Arctic research for the next decade and (3) to initiate joint research projects among arctic researchers to be conducted during the International Polar Year (IPY) to be held in 2007 to 2009. It is our hope through such cooperation and collaboration, we can achieve the level of understanding needed to be confident in our predictions of future environmental changes in arctic regions. Research results presented here in the Seventh International Conference on Global Change: Connection to the Arctic will help us advance towards that goal.

Larry Hinzman

Keynote Speaker

Atsumu Ohmura

President, International Glaciological Society
Director, World Radiation Monitoring Centre (WCRP, GCOS)
Institute for Atmospheric and Climate Science

Special aspects of mass balance of Arctic glaciers in the warming climate

Although the expected temperature rise in the polar regions in this century appears to become very large in terms of annual mean temperature, the change in summer temperature in the Arctic remains small. This is one of the most important and common results coming from most GCM experiments. This rather strange pattern of temperature change is due to the damping effect owing to the sea ice melt over the vast area in the Arctic. According to the transient experiment based on ECHAM5 and IPCC scenario A2, the mean temperature rise for the summer months June, July and August remains within 1 deg C even towards the end of the 21st century for most of the glacierized regions of the Arctic. This aspect puts the future of the Arctic glaciers and their effect to the sea-level rise into a very different situation in comparison with other mountain glaciers and ice caps in middle and lower latitudes.

Table of Contents

1. International Polar Year 2007-2008

	page
<u>Oral presentations</u>	
Takeshi Naganuma and Annick Wilmotte The MERGE: an IPY activity	2
Katey M. Walter, Guido Grosse, Sergey A. Zimov, Mary Edwards, F. Stuart Chapin III An IPY effort to improve estimates of pan-arctic lakes contribution to the global atmospheric CH ₄ budget	6
Guido Grosse, Vladimir Romanovsky, Kenji Yoshikawa, Torre Jorgenson, Yuri Shur, Katey Walter, Larry Hinzman, Jerry Brown Circumarctic Thermokarst Assessment - Initiation of an effort to quantify the impacts and feedbacks of permafrost degradation	8
Olga Lovick Lost in translation: What linguistics has to offer climate research	10
Amy C. Tidwell and Daniel M. White Water Supply Sensitivity to Climate in Nome, Alaska: A Case Study of the Moonlight Springs Aquifer	12
<u>Posters</u>	
Teresa Hollingsworth, Jill Johnstone, F. Stuart Chapin III Changing successional trajectories in Alaskan black spruce forests: Linking pre-fire site characteristics to post-fire successional trajectory	13
Sebastian H. Mernild Freshwater runoff from eastern Greenland 1997-2005 and 2071-2100	14
Chris Petrich, Hajo Eicken Fluid dynamics simulations of nutrient availability in Arctic sea ice sheets	18
Elena B. Sparrow, Jessica H. Robin; Leslie S. Gordon, Kim Morris, Elissa R. Levine, Martha R. Kopplin, Martin O. Jeffries, Rebecca Boger, and David L. Verbyla Engaging pre-college students in the International Polar Year through Earth system science research and education	19

2. Atmospheric Circulation, Dynamics and Chemistry

<u>Oral presentations</u>	
Jia Wang Arctic Dipole Anomaly and its contribution to sea ice export from the Arctic Ocean in the 20th century	22

Hiroshi L. Tanaka, Shingo Kato, Ippo Suzuki	23
A trial of predicting the Arctic Oscillation index using the barotropic S-model	
Nicole Mölders, Zhao Li and Gerhard Kramm	27
Influence of radiative forcing and land-cover changes on precipitation recycling in Alaska and Siberia	
Gerhard Kramm, Ralph Dlugi, and Nicole Mölders	30
An Improved blending-height concept for aggregating fluxes of sensible and latent heat, momentum, and carbon dioxide over heterogeneous landscapes	
Zhao Li and Nicole Mölders	35
Use of an analysis of variance (ANOVA) for assessing uncertainty in Alaska's future water cycle caused by land-cover changes and CO ₂ increases	

Posters

Peter Bieniek, Martha Shulski, Gerd Wendler	36
Climate and predictability of Alaskan wildfires	
Xingang Fan, John E. Walsh, Jeremy R. Krieger	37
A one-year experimental arctic reanalysis and comparisons with ERA-40 and NCEP/NCAR reanalyses	
Devdatta P. Kulkarni and Debendra K. Das	38
Energy savings in heating buildings and reducing atmospheric pollutants using nanofluids	
Mio Matsueda, Masayuki Kyouda, H. L. Tanaka and Tadashi Tsuyuki	42
Daily forecast skill of multi-center grand ensemble	
V. Tymofeyev	46
Coherent patterns in recent climate changes in both polar regions	
Takashi Yamanouchi	50
Trends in cloud amount and radiation at the Arctic and Antarctic stations	
Naomi Yokoyama and Hiroshi L. Tanaka	55
Seasonal variation of the Arctic Oscillation	
Takao Yoshikane	59
Numerical study for the formation mechanism of the climatic cold region over the east Siberia in December 2005	

3. Oceanic Circulation and Sea Ice

Oral presentations

Lawson W. Brigham, Michael S. Timlin and John E. Walsh	64
Bering Strait Region Future Sea Ice Retreat	
Hibler, W. D. III, A. Roberts and J. Hutchings	68
The effect of tidal and inertial variability on Arctic sea-ice mass balance	

Chris Petrich and Hajo Eicken	69
Fluid dynamics simulations of nutrient availability in Arctic sea ice sheets	
Sang Heon Lee	70
Ecological significance in different characteristics of bottom sea ice algae at different regions of the Arctic Ocean	
Kohei Mizobata and Jia Wang	71
Phytoplankton dynamics fluctuated by the Ice-Ocean circulation in the Chukuchi and Beaufort Seas	
Sei-Ichi Saitoh, Takahiro Iida, Kohei Mizobata and Mitsuhiro Toratani	75
Recent Variability of Coccolithophore Blooms in Eastern Bering Sea Shelf	

Posters

Uma S. Bhatt, Donald A. Walker, Martha K. Reynolds, Josefino C. Comiso	76
Influence of regional sea ice variability on arctic tundra	
David Darbinyan	79
Arctic Ocean halocline inter-annual variability	
Hiroyuki Enomoto	80
Trans-Arctic sea ice observation	
Sergey Pisarev	81
Interannual variability of the Atlantic derived water penetration into/from the Arctic Basin within the northern margin of the Kara Sea	
Oleg M. Pokrovsky	82
A casual link between the eastern arctic ice extent reduction and changes in the atmospheric circulation regimes over northern Asia	
Rachel A. Potter, Andrew Bray, Tony D'Aoust, David Musgrave, and Tom Weingartner	86
An application of HF radar in the coastal Beaufort Sea	

4. Middle Atmosphere and Space Weather/Geodynamics

Oral presentations

Yasuhiro Murayama	88
The last decade of middle and upper atmosphere observations of Japan-US joint program	
Masaki Tsutsumi	89
Radar network observations of polar mesosphere and lower-thermosphere	
Yoshihiro Tomikawa, Kaoru Sato, Kazuyuki Miyazaki, Toshiki Iwasaki and Kiyotaka Shibata	92
Modified Lagrangian-mean analysis of stratospheric sudden warmings	
Minoru Kasahara, Hiroki Miyamachi, Hiroaki Takahashi, Masayoshi Ichiyanagi, Takahiro Maeda, Sen Rak-Se, M.Valentin, V.Bormotov, E.Gordeev, A. Ivashchenko, M.Gerasimenko and L.Gunbina	94
New broad-band seismic network for imaging the stagnant slab beneath the far eastern Russia	

Satoshi Miura, Tadahiro Sato, Hiromi Fujimoto, Wenke Sun, J.T. Freymueller, A.Kaufman, R.Cross	95
Geodetic measurements for monitoring rapid crustal uplift in southeast Alaska caused by post-glacial rebound – Outline of the Project -	

W. Sun, S. Miura, H. Fujimot, T. Sato, M. Kaufman, R. Cross, and J. Freymueller	98
Geodetic measurements for monitoring rapid crustal uplift in southeast Alaska caused by post-glacial rebound – Absolute gravity measurements	

Poster

K. Sakanoi, Y. Murayama, R.L. Collins, and K. Mitzutani	101
Middle atmosphere disturbance in the western arctic during winter	
T. Sato, S. Miura, H. Fujimot, W. Sun, M. Kaufman, R. Cross, and J. Freymueller	105
Geodetic measurements for monitoring rapid crustal uplift in southeast Alaska caused by post-glacial rebound - Observation of Gravity Tide at Juneau in Southern Alaska	

5. Hydrology and Permafrost

Oral presentations

Fortier, D., Shur, Y., and Allard, M.	108
Will underground thermo-erosion occur more frequently under a warmer climate?	

Jessie Cherry	109
Acceleration of the Arctic Water Cycle: evidence from the Lena Basin, Siberia	

Tingjun Zhang, Daqing Yang, Oliver W. Frauenfeld, Larry Hinzman, Andrew Etringer, James McCreight, David Gilichinsky, and Roger G. Barry	110
Hydrological Response to Changes in Active Layer and Permafrost Conditions in the Russian Arctic	

Sveta Berezovskaya and Douglas L. Kane	112
Representativeness of snow water equivalent measurements for hydrologic applications on Alaska's Arctic Slope	

Kazuhisa A. Chikita, Yongwon Kim, Isao Kudo, Daisaku Kido, Kazuki Okada, Yuh-ichi Narita, Tomoyuki Wada	116
Characteristics of Discharge and Sediment load from the Yukon River Basin	

Torre Jorgenson	120
Nature and Extent of Permafrost Degradation in Alaska	

Posters

Bob Busey	126
Estimating permafrost distribution on Alaska's Seward Peninsula at three time periods: early 20th century, early 21st century and late 21st century	

Hiromu Daimaru, Yojiro Matsuura, Takuya Kajimoto and Olga A. Zyryanova	127
Influence of slope landform on the ground thermal regime in Tura, Central Siberia	
Koichiro Harada, Yuki Sawada, Kenji Norita, Masami Fukuda	131
Monitoring of permafrost conditions after wildfire in Seward Peninsula, Alaska	
J.W. Harden, K.L. Manies, J. Munster, J.L. Bubier, M. C. Mack	135
Changes in type, cover and production of moss in a fire chronosequence of black spruce in Interior Alaska	
Yoshiyuki Ishii, Yuji Kodama, Yongwon Kim, Koichiro Harada, Yuki Sawada, and Masami Fukuda	137
Impacts of wildfire on the hydrological environment in Interior Alaska	
Yuji Kodama, Yoshiyuki Ishii, Yong-won Kim	141
Observation of soil CO ₂ efflux at Poker Flat wildfire burned site in 2005 and 2006	
Anna Liljedahl	142
Arctic coastal hydrology over time: Timing, magnitude and direction	
Ipshita Majhi and Daqing Yang	143
Hydrology of the Yana Basin in Eastern Siberia	
Matt Nolan	147
Climate interactions in arctic Alaska	
Jon O'Donnell	148
DOC composition at spring snowmelt and summer baseflow in boreal forest streams of interior Alaska	
Yuki Sawada, Koichiro Harada, Yoshiyuki Ishii, Gaku Yamazaki, Yuji Kodama, Kenji Norita, Shiro Tsuyuzaki, Masami Fukuda	149
Possible thermal and Hydrological changes on permafrost and active layer	
Igor Semiletov, N. Shakhova, O. Dudarev, D. White, C. Belzile, I. Pipko, and A. Charkin	153
Transport and fate of the terrestrial particulate material and organic carbon derived from thawed permafrost in the East-Siberian Sea and adjacent part of the Laptev Sea	
Natalia Shakhova and Igor Semiletov	157
Geochemical and geophysical evidence of methane venting on the Laptev shallow shelf	
Tomoyuki Wada, Kazuhisa A. Chikita, Isao Kudo, Daisaku Kido, Yu-ichi Narita	161
Discharge, sediment load and chemistry in the Tanana River, Alaska	
Daqing Yang, Douglas Kane, Sveta Berezovskaya, Baisheng Ye	165
Hydrologic Changes In The Large Northern Watersheds after the 2004 Boundary fire in Poker Flat Research Range, Interior Alaska	

6. Arctic System Model

Oral presentations

John Cassano	168
Atmospheric Response to Predicted Changes in Arctic Sea Ice Cover During the 21st Century	

William J. Gutowski, Jr., Helin Wei, Charles J. Vörösmarty and Balázs Fekete	169
Influence of Arctic Wetlands on Arctic Atmospheric Circulation	
Wieslaw Maslowski	173
Arctic Sea Ice Cover Change or Arctic System Change? Focus on Response to Forcing and Impact on Global Climate	
J. Zhang	174
Dynamical Downscaling of Climate for Driving Glacier Mass Balances: Verification	
P.H. Larsen, O.S. Goldsmith, and M.L. Wilson	175
A probabilistic model to estimate the value of Alaska public infrastructure at risk from climate change	
Debasish Pai Mazumder, Zhao Li and Nicole Mölders	179
Evaluation of soil temperature climatology derived from simulations with the fully coupled Community Climate System Model version 3.0 over Russia	

Posters

Stefanie M. Bourne, Uma S. Bhatt, Jing Zhang	182
Evaluation of surface-based temperature inversions Fairbanks, Alaska, in regional and global climate models	

7. Ice Sheets, Glaciers and Paleoclimate

Oral presentations

Chris Larsen	188
Light aircraft altimetry measurements from 2006, Icy Bay and eastern St. Elias Mountains, Alaska	
Reginald R. Muskett, Craig S. Lingle, Jeanne M. Sauber, Bernhard T. Rabus, and Wendell V. Tangborn	189
Acceleration of Thinning of the Tidewater Glaciers of Icy Bay, Alaska, from InSAR DEMs and ICESat Laser Altimetry	
Wendell V. Tangborn, Jing Zhang, Craig S. Lingle, Uma Bhatt	193
Increasing temperature departures, rising atmospheric CO ₂ concentrations and decreasing glacier mass	
M. Truffer¹, M. Fahnestock², J. Amundson¹, R. Motyka	197
Velocity variations on Jakobshavns Isbræ: Long term trends and short-term variations	
Regine Hock	198
Global glacier mass losses and mass balance sensitivities assessed from observations and gridded climate data	

Poster

- Daisaku Kido, Kazuhisa A. Chikita, Yuihchi Narita, Tomoyuki Wada** 199
Characteristics of water discharge and sediment load from Gulkana Glacier, Alaska
- Kazue Suzuki, Takashi Yamanouchi, Naohiko Hirasawa, and Hideaki Motoyama** 203
Moisture transport to Syowa Station and Dome Fuji Station, Antarctica

8. Arctic Ecosystem and Fire Impacts

Oral presentations

- A. Osawa, T. Kajimoto, Y. Matsuura, A.P. Abaimov, O.A. Zyryanova, N. Tokuchi, M. Hirobe, K. Kondo, Y. Nakai, H. Daimaru, A.S. Prokushkin, A.V. Volokitina, and M.A. Sofronov** 208
Age sequence of stand structure, carbon accumulation and allocation, and net primary production in permafrost larch (*Larix gmelinii*) ecosystems in Siberia: current knowledge and future study
- Teresa Hollingsworth, Jill Johnstone, F. Stuart Chapin III** 212
Changing successional trajectories in Alaskan black spruce forests: Linking pre-fire site characteristics to post-fire successional trajectory
- Naoko Tokuchi, Muneto Hirobe, Kazuma Kondo, Satoru Hobara, Eri Mizumachi, Yojiro Matsuura, Takuya Kajimoto, Anatoly P. Abaimov, Olga A. Zyryanova, and Akira Osawa** 213
Nitrogen cycling in larch forests on permafrost in central Siberia
- Kyle Joly & Randi R. Jandt** 217
The unidirectional influences of wildfire, disturbance by caribou, global climate change and shrub expansion on arctic ecosystems
- Tomoaki Morishita** 221
CO₂, CH₄, and N₂O fluxes from a larch forest soil in Siberia
- Scott Rupp** 224
Climate-fire-vegetation interactions and their effects on forest composition and ecosystem services

Posters

- Masako Dannoura And Mayuko Jomura** 225
The change of CO₂ efflux from CWD and root after forest fire in central Alaska
- Eugenie Euskirchen** 229
Energy feedbacks of northern high latitude ecosystems to the climate system due to reduced snow cover during 20th century warming
- Masami Fukuda** 230
Outline of research activity of joint study on impact of 2004 Alaskan large forest fire on terrestrial environment between Hokkaido Univ. and UAF in 2006
- Hiroshi Hayasaka and Randi Jandt** 231
Recent Alaskan forest fires under climate change

Muneto Hirobe, Satoru Hobara, Naoko Tokuchi, and Yojiro Matsuura	232
Effects of unburned moss island on local soil properties in a burned black spruce forest in interior Alaska	
Satoru Hobara And Muneto Hirobe	235
Fire effects on DOC and metal concentrations in an Alaskan boreal forest	
Mayuko Jomura and Masako Dannoura	239
Spatial distribution and decomposition process in coarse and fine organic matter caused by forest fire	
Takuya Kajimoto, Aira Osawa, Yojiro Matsuura, Anatoly P. Abaimov, Olga A. Zyryanova, Naoko Tokuchi, Muneto Hirobe, Kazuma Kondo, Yuichiro Nakai, Hiromu Daimaru, Anatoly S. Prokushkin, Alexandra V. Volokitina, Mark A. Sofronov	243
Age-sequence of stand structure, carbon accumulation and allocation, and net primary production in permafrost larch (<i>Larix gmelinii</i>) ecosystems in Siberia: current knowledge and future study	
Norihisa Kamibayashi	244
Detection of forest decline in Alaska	
Eric S. Kasischke, Merritt R. Turetsky, Evan S. Kane, Roger Ottmar, and A. David	245
Factors controlling organic-layer consumption in Alaskan black spruce forests	
Yongwon Kim and Noriyuki Tanaka	249
Winter fluxes of CO ₂ and CH ₄ in boreal forest soils of central Alaska: implications for the regional carbon budget	
David R. Klein	253
Polar bears on Bering Sea islands: Holocene climate change influences	
Lina Koyama, Naoko Tokuchi, Muneto Hirobe, Satoru Hobara, Karl Olson and Knut Kieland	254
Plant response to biogeochemical shifts in Nitrogen dynamics following wild fire	
Yojiro Matsuura, Takuya Kajimoto, Yuichiro Nakai, Akira Osawa, Tokomaki Morishita, Olga A. Zyryanova, Anatoly P. Abaimov	258
Carbon budget in a larch (<i>Larix gmelinii</i>) ecosystem of continuous permafrost region in central Siberia	
David McGuire	262
Integrating regional changes in climate feedbacks of arctic terrestrial ecosystems	
Yuichiro Nakai, Yojiro Matsuura, Takuya Kajimoto, Olga A. Zyryanova and Susumu Yamamoto	263
Water and CO ₂ exchange at a Gmelin larch forest on continuous permafrost of central Siberia during growing seasons	
Kyotaro Noguchi	262
Effects of wildfire on fine-root biomass in a black spruce forest	
Timothy Shilling Susan D. Hazlett	268
Proposed model of terrestrial and marine linkages in glacial and post-glacial fjords	
Masaki Uchida, Naoko Kan, Shinpei Yoshitake, Takayuki Nakatsubo, Hiroshi Kanda and Hiroshi Koizumi	272
CO ₂ emission from plant litter during winter on a High Arctic glacier foreland	
Takeshi Ueno, Takashi Osono and Hiroshi Kanda	276
Inter- and intra-specific variations of the chemical properties of high-Arctic mosses along water regime gradients	

- Shinpei Yoshitake, Masaki Uchida, Takayuki Nakatsubo, Hiroshi Koizumi, Hiroshi Kanda** 279
Soil respiration in a High Arctic glacier foreland in Ny-Ålesund, Svalbard: Is it limited by low carbon and nitrogen availability?

9. Remote Sensing of Environmental Change

Oral presentations

- Nettie La Belle-Hamer** 284
Alaska Satellite Facility: A Data Provider's Perspective on the Challenges Facing Climate Research
- Masahito Ueyama and Yoshinobu Harazono** 286
Satellite observation of ecosystem productivity over Alaskan black spruce forests
- Mitsuhiro Toratani** 287
Distribution of chlorophyll-a concentration around mouth of Yukon River
- Kyle McDonald** 288
Variability in frozen and thawed seasons in the terrestrial high latitudes: Characterization with spaceborne microwave remote sensing
- Koji Nakau, Masami Fukuda, Keiji Kushida, Hiroshi Hayasaka, Hiroshi Tani, Keiji Kimura and Yumiko Nagamine** 289
Validation of wild fire detection algorithm in boreal area
- Rikie Suzuki** 293
Preliminary analysis on interannual response of global NDVI for precipitation, temperature, and radiation

Posters

- Yoshinobu Harazono, Nana Nishida, Yoshiaki Kitaya, Masahito Ueyama and Walter C. Oechel** 297
Application of Greenery Ratio (Visible Trichromatic Strengths) to Estimate Stand Scale CO₂ Budget
- Masahiro Hori, Teruo Aoki, Knut Stamnes, and Wei Li** 298
Spatial and seasonal evolution of satellite-derived snow physical parameters in the Arctic regions in 2003
- John S. Kimball** 300
Satellite detection of recent drought-induced decline in vegetation productivity for the pan-Arctic basin and Alaska
- Shizuka Kimura, Hiroyuki Enomoto, Tomonori Tanikawa, Ryo Toshiro, Yongwon Kim, and Yoshihiko Saito** 301
Satellite observations of snow cover, melting and property changes over Alaska
- Isao Murata, Hideaki Nakajima, and Hiroshi Fukunishi** 304
Adjustment of optics for the height retrieval from ground-based solar spectra
